PARKS IMPACTSTART-UP SEMINAR 【Climate Tech×Impact Startups Creating Decarbonization in Kyushu and The future of Economic Growth】

"Climate Tech," which addresses the urgent social issue of climate change with innovative technology and business models, is a next-generation growth area aims to realize the significant impact of balancing environmental and social contribution with economic growth.

Moreover, Kyushu, with its abundant renewable energy and agricultural, forestry, and fishery resources, is an attractive field for demonstration and implementation for such startups.

In this project, we will invite climate tech startups taking on the challenge of this major challenge, and they will share their innovative business models and strategies.

Furthermore, we will discuss the specific possibilities of how to combine their technology with the unique resources and industries of Kyushu to co-create new value and a sustainable future originating from the region.
